CONVERSION TABLE FOR EGG WEIGHTS

For converting egg-weight points to ounces per dozen  
by M.W.Olsen, assistant poultry husbandman

Decimal fraction	Score in points for designated number of ounces per dozen									
	18	19	20	21	22	23	24	25	26	
.0	.700	.750	.800	.850	.900	.950	1.000	1.050	1.100	
.1	.705	.755	.805	.855	.905	.955	1.005	1.055	---	
.2	.710	.760	.810	.860	.910	.960	1.010	1.060	---	
.3	.715	.765	.815	.865	.915	.965	1.015	1.065	---	
.4	.720	.770	.820	.870	.920	.970	1.020	1.070	---	
.5	.725	.775	.825	.875	.925	.975	1.025	1.075	---	
.6	.730	.780	.830	.880	.930	.980	1.030	1.080	---	
.7	.735	.785	.835	.885	.935	.985	1.035	1.085	---	
.8	.740	.790	.840	.890	.940	.990	1.040	1.090	---	
.9	.745	.795	.845	.895	.945	.995	1.045	1.095	---	

The top horizontal line of figures (reading from 18 to 26) combined with the left hand column of decimal fractions (reading from .0 to .9) represents the egg weight.

The figures in the body of the table represent the score in points for each egg with its corresponding weight per dozen.

The points for one egg are obtained by dividing the total number of points awarded at the State egg-laying contest by the total number of eggs laid by the bird.

By referring to the table the point so obtained will show the equivalent weight in ounces per dozen.

Example: Total points, 221.8; total production, 204.  $221.8 \div 204 = 1.087$  points for one egg. By referring to the table, 1.087 corresponds to 25.7 ounces per dozen.
